# HFHC Healthcare URGENT (desktop only) amends.

*I welcome the chance to discuss any queries you might have Ed, feel free to ring through, and hopefully that way we can get this right first time without need for further amends.*

## HOMEPAGE

**Navigation, header and main image**
– Request call pop-up needs to be coded, this is currently missing. Please refer to visuals and asset pages previously provided.

As Discussed – Priority will be accordion section on Paying for Care Overview.

– Top blue bar below 1024px, please view tablet visual. We should have request call button, alongside the three numbers, each taking a quarter of the working area in width. Text should never stack, once it begins to do so, stack segments as per mobile visual.

This is part of the mobile dev.

– Once you open a dropdown, and move your mouse away from this, the dropdown should retract. The only way to remove them on Safari and Chrome is to click elsewhere on the page. On Firefox it does this, but only after a lengthy delay.

Unable to recreate this

– Missing button over header image, at base of text 'Who we are, what we do' in Chrome and Firefox. On Safari this is there, but on hover the shadow is on the text not the shape. This applies to all buttons over images on hover state.

Fixed the shadow issues – buttons have been removed in the CMS. I have added one back in on the home page to demonstrate.

– Below 768px, when you have text on an image, there should no

longer be supporting text, just title and button.

– Remove search bar which is only present on Firefox between 1024px – 670px.

– Following navigation as you scroll down the page, should have dropshadow beneath.

Done

– When below 932px, the title sticks to the top of the image area. The text and button should be centred within visible space (from top of image to top of buttons)

– When loose blog button from blue panel at top as screen condenses, please add to core navigation list next to about us.

Done

**Who we are:**
– Button missing below who we are section, 'discover more', which directs people to the about us page.

Done

– Title missing above carousel.

– Carousel needs amending as follows:
Incorrect images, see those sent previously (can send again if misplaced).
Missing carousel panel for establishment staffing solutions'.

These just need adding/editing in the CMS

Minimum width of panels is 285px.

**Work for us image segment**
– See assets originally provided for correct image for 'work for us' segment. Updating this, will allow supporting text line to be the right width.

Needs changing in the CMS

– Work for us panel, three buttons. Left should say 'job roles' and the right should say 'Careers with us' and take the user to the working for HFHC Healthcare page.

Needs changing in the CMS

**Article area**
– Article link area:
Title should say 'latest industry news'.
Needs changing in the CMS

Margin between panels should be 20px.
Missing button below, for 'explore our blog', 60px below panels, and then 10px below that before footer swoosh begins.

I have added a button – just a simple CMS entry

– Links broken for different articles (all going to same place)

I cannot see this happening

– Below 1440px, the panels should reduce in number, from 3, to 2, to 1. This happens between 860px – 1440 where these should be width ways (see tablet visual for reference). There will always be the 20px gap between, and these adjust in width to fill the required space. Minimum width of panels is 224px.
The Design has 5 articles in a row – but we only have 4 articles on

**Footer**
Please refer to tablet view for footer above 768px as needs styling below 1020px.
When below 768 and stacks to single column, give 20px more between logo and get in touch title. Missing divider between social icons and supported by.

**OUR SERVICES**

**Text area**
– Top paragraph, please add consistent spacing for the top of this from main image area. For example, dementia care is only 30px from base of image, whereas complex care is 72px. There should be an 80px gap, consistent across this template.

They are consistent, so I am unsure what he is looking at here. Maybe he started looking at this a while ago? Were there some rogue carriage returns in the text maybe?

– Need to have a consistent 30px gap between end of text area and where the swoosh begins, otherwise there is overlap, and lowest line of text is covered with a white overlap, such as happens at 1098px with top text area and blue swoosh on services page. Blue swoosh should have transparent background (not white), an SVG,

and placed on lower layer than text to avoid potential overlay.

This will not work – the top of the swoosh needs to be solid white because of the curve. Without it, it will look like this:

HTML Cannot do curves, so we must hide the edges behind solid images – a png image, rather than svg image is better for this purpose – svg's give sharper curves but curves generally are not straight forward to manage in fluid/responsive HTML pages, which is why you do not see many designs with them. We will maybe have to fine tune this every time the content is updated – or maybe consider breaking it up into more manageable sections?

I had to vary the bottom padding depending on screen width to resolve the 1098px issue, which I have now done, to get a best fit in the scenario described and the volume of content entered in this section.

– Remove to top button on 'regulation and compliance' and 'what is home care'. If there isn't a relevant link to another page, don't feature a button. Same on other segments across services set of pages such as on the complex care pages.

Someone has removed these already?

– for blue two column segments, please centre text within space. So for example on services page, 'our home care services' and 'regulation and compliance'.

This is not how the design shows these blocks. I have added in an option to center align these in each block.

**Want to discuss…**
Email and phone to be in the dark blue, not light blue. #184367

– Title should be centred, which it isn't once stacked on establishing staffing solutions.

Where is this – has it been removed?

**CAREERS**

**Overview**
– Base of careers main page, below red swoosh, should be 40px below type and 'so why work for us' title. Currently overlap. Similar applies to the positions offered page, below green swoosh to title where should be 80px gap.

Careers Main Page and Positions Offered – Space between rows of content is controlled in the CMS by adding a spacer block. At the moment the gaps are at 0, hence the effect specified:

— So why work for us? —

- Immediate vacancies
- Free initial and ongoing training
- Exciting career development opportunities
- A competitive wage
- Weekly pay

- £250 bonus after the later of 200 hours or 12 weeks employment
- Working for a business with real family value that really makes a difference
- A great support system behind you
- Diverse client base – from learning disability and mental health support

Add white space between bl
and customise its height.

**Spacer Settings**

Height in pixels

80

**Advanced**

— So why work for us? —

- Immediate vacancies
- Free initial and ongoing training
- Exciting career development opportunities
- A competitive wage

- £250 bonus after the later of 200 hours or 12 weeks employment
- Working for a business with real family value that really makes a difference
- A great support system behind you

– arrow button in 'so why work for us', needs to have same circle line weight as the vertical line as per visual, plus button is without the associated action, to drop the user further down the page, to just below where the arrow button lies.
Need and SVG file for the line width width issue please.

**Positions offered**

– Positions offered page, under each title, the links should be separate buttons. Such as 'care worker job description'.

– Remove 'learning disability' two words at end of description on 'positions offered' page, under learning disability title.

– Four green buttons, should have 15px margin so that text does not leave green box. When these begin to stack, such as at 830px, they should change to mobile view styling, where buttons are stacked vertically. Please also centre the text and arrow in the space, with 15px from text to arrow. This applies to all dropdown buttons.

This is all done I think

– Below 1024px, the margins are no longer applied, for example the 'our ethos' text sticks to side of screen. Add margins. This applies to all career template pages.

– Currently you have it set to mobile view below 1024, where images appear below text. The two column nature should be in place until 768px, and at this point, use mobile visual for reference. Images should appear below the relevant text and buttons, and be full width with 20px margin either side. Swooshes have also disappeared. Spacing is also odd and needs looking at. This applies to all career template pages.

So I tend to go above this – as the 768px is iPad Portrait widths only. Android tablets and iPad pro screens currently are 800px – 1024px wide in portrait. Data shows users of these devices are 3 times more likely to convert on mobile optimised displays.. Based on this it is very likely we will see future versions of iPad and iPhones increase their screen size. We should look at mobile below 1024px, not 768px.

– job description links, these pages need to be coded to new style. Currently in old website style. Someone needs to look at these still.

**Vacancies**
– Vacancies job posts are still to be coded as in old style.

– Look again at the blue segment below the header image, as needs 80px above and below first text area. This is most notable below 1254px, where the margins drop down to 20px above, 10px below.

– Below 1024px the dropdown buttons are not sending the user to the correct place.

If this needs to change, we need a set of designs for it please.

**Application form**
– Application form is still in old style. Should follow form field style from Request a call pop-up.

- -

**PAYING FOR CARE**

– Note distance around first paragraph to swoosh. Most notable on the Local Authority Funding page, where swoosh is very high and overlaps text area.

– Private funding page, give 40px distance from base of swoosh to top of pink button space.

I have addressed these issues

## BLOG

– Background to be the light blue, not mid-grey. This way it then continues down to beneath footer. Same styling can be applied to vacancies.

Done.

– Add share links and contact details as per visual.

– Add read more pink button and return to article list button.

Done on just https://hfhc2.making.me.uk/planning-for-end-of-life-care/

– below 840px, speech mark on main listing titles covers text.

– Add button style as 'read more' button on listing.

Done
